History: This message has been forwarded.

On Tuesday, November 28th, we had a fairly productive stormwater meeting. At the close of the meeting, we identified two action items:

- 1) A small technical team comprised of Andy K., Dawn S., Carl S., Kristine K., and Karen Tarnow will meet within a week or so to agree on the sampling approach that will be applied to the representative and high priority outfalls.
- 2) I would develop and distribute a straw person for the high priority and representative land use outfalls to be sampled during the 2006/2007 water year.

This straw person is attached.

I also agreed to develop an agenda for the meeting, so here it is:

Meeting Date: November 30, 2006

Meeting Time: 11:00 am - 2:00 pm.

Meeting Place: Schwabe, Room 1650 (on the 16th floor of the PAC West Building)

Call-in Number: nonresponsive . Pass Code: nonrespo

Meeting Objectives:

Discuss and reach agreement on which outfalls will be sampled during the 2006/2007 water year.

Discuss and reach agreement on which outfalls will be sampled using the to be developed sampling approach.

Discuss and reach agreement on who will be responsible for sampling which outfalls and under what program.

With regard to the last point, it is clear that there are a number of viewpoints regarding who is responsible for characterizing stormwater discharges to the Willamette River and in particular, whether this is an upland or in-water PRP responsibility. Legal arguments can be made to support either position. However, for tomorrow's meeting, I would like us to put those arguments aside and instead think about how we can cobble together an approach to characterize key outfalls during the 2006/2007 water year and avoid undue schedule delays.

Thanks, Eric
